

Visual story:

Accessing the 'Innovations' Exhibit.

A step-by-step visual and written guide for visitors attending the 'Innovations' exhibit.

What is a Visual Story?

Visual stories are simple and easy to follow. They help people get ready for new places or situations by making things more predictable.

This makes the process feel familiar and reduces anxiety and stress.

Come and enter the 'Innovations' exhibit!

Welcome and explore the exhibit that celebrates the innovators, researchers and creators of Western Australia.

With a modern and airy room, there is plenty of space to twist and turn.

Look up and see the modern creations Western Australia has to offer.

There are also examples of beautiful things WA has to offer to the world, including an example of stained glass, of the Swan River Institute with a black swan on show in centre.

Come and look under the microscope, and follow
in the footsteps of our scientists!

There is so much to see and explore. As many unique things as there are unique people in WA!

See if you can find other surprising little treasures, like this little green creature statue.

WA also has a rich, creative history.

WA also has a vast literary history. Come see some WA based authors, such as May Gibbs and her famous gumnut babies.

WA is also known on the world stage for our theatre and ballet.

WA is always evolving, whether that be art, research or innovation.

We hope you have enjoyed the 'Innovations' Exhibit. After you have finished, please explore the rest of the Museum.
